Made with certified compostable ecovio® by BASF

### Introducing DualPakECO®

Australian Made & Australian Certified Compostable Dual Ovenable Paperboard Tray

DualPakECO<sup>®</sup> is a coated paperboard food tray. This tray is coated with a food safe, compostable biopolymer coating. The coating itself provides excellent barrier properties against liquids, aromas and oils. DualPakECO<sup>®</sup> is one of the first Australian made 100% certified compostable paperboard food trays, which is both ovenable and microwavable.

DualPakECO<sup>®</sup> has been created in partnership with BASF, world leaders in the development of fully certified compostable biopolymer coatings.

## What is DualPakECO<sup>®</sup> made of ?

#### THE PAPERBOARD

DualPakECO<sup>®</sup> food trays are made using a pressed paperboard. Made from renewable resources and recyclable, the board is lightweight yet rigid enough for in-line production facilities. It also offers secure sealing across a variety of film substrates and machinery.

#### THE BARRIER LAYER - ecovio<sup>®</sup> by BASF

ecovio<sup>®</sup> by BASF is a worldwide certified compostable biopolymer. As a coating to paperboard food products ecovio;<sup>®</sup>

- Provides a superior barrier against fat and oils.
- Provides a barrier against aromas, hot and cold liquids.
- Is an effective functional barrier against the migration of undesirable mineral oils, creating a food safe package.
- Helps to preserve food freshness and flavours.

## Why the move to composting ?

#### LESS TO LANDFILL

DualPakECO<sup>®</sup> is certified to Australian standard AS4736-2006. DualPakECO<sup>®</sup> trays carry the seedling logo as verified by the Australasian Bioplastics Association.

Commercial composting is an integral part of a circular economy where waste can be turned into a valuable resource rather than be disposed of in landfill. As more communities introduce source separation systems for diverting food waste from landfill, having certified compostable products will give consumers and organics recyclers (commercial composting facilities), the assurance that the products will completely biodegrade in efficiently run systems.
